

New Generics Available!

Safe, Effective and Lower Cost

Rev. March 2009

If you want to save on your prescription drug costs, consider generics! Many people find them to be a good, safe choice. In fact, nearly 66% of prescription drugs are now filled with generics. The U.S. Food and Drug Administration (FDA) requires generics to have the same quality, strength, purity and stability as their brand-name counterparts. And, the FDA holds generics to the same stringent safety and performance standards as brand-name drugs. Your doctor is best able to help you choose your prescription drugs, but we think you'll both find that generics are a good and safe choice. Best of all, generic drugs are always on our Preferred Drug List!

Below you'll find a few of the generics approved by the FDA, along with their brand-name counterparts. If you are taking one of the brand-name drugs on this list, ask your doctor if the generic version is right for you.

Generic Drug	Brand-Name Drug	Commonly Used for
albuterol	AccuNeb	Asthma
fexofenadine	Allegra	Allergies
ramipril	Altace	High blood pressure
